Development of the management information system

Management information systems (MIS) are computer-based systems that collect, process, store, and disseminate information to support the decision-making process in an organization. They are designed to provide managers with the data and information they need to make informed decisions about the organization's performance and future direction.

Management information systems (MIS) are computer-based systems that collect, process, store, and disseminate information to support the decision-making process in an organization.
